8th CSPCWG Meeting Turku, Finland, 29 November – 2 December 2011

Paper for Consideration by CSPCWG

Enhancement of the distinction between new and old soundings (sloped/upright)

Submitted by: Denmark

Executive Summary: Could we make the difference between sloped and upright soundings

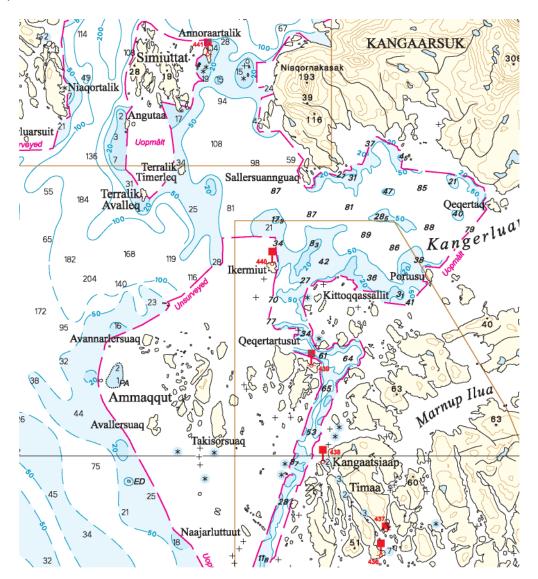

more conspicuous?

Related Documents: S-4 B-412.4

Related Projects: None

Introduction / Background

Due to responses from the users of our Greenlandic charts regarding difficulties in differentiating new and old soundings (see example below), Denmark would like to know if other nations have similar problems or could give guidance to a better presentation of hairline soundings (e.g. change of line weight).

Analysis / Discussion

Could we make the difference between sloped and upright soundings even more conspicuous?

Should we consider the possibility to enhance areas with new (sloping) soundings in source diagrams using tint?

Conclusions

None

Recommendations

None

Justification and Impacts

None

Action required of CSPCWG

The CSPCWG is invited to consider and discuss the issue.
