

## **Updates to Master Test Cases Spreadsheet.**

A small number of typos and an incorrect "expected" symbol have been identified in the original spreadsheet containing the master test case list posted on the UKHO website. This note details the issues and the correct values. The spreadsheet on the website has been updated accordingly. No updates to the S-57 test dataset are required.

1. The expected symbol for test case 42 is incorrect. The correct symbol is UWTROC04
2. The symbolisation text for test cases 27, 30 and 35 should not include the sounding. The sounding should not be displayed in these cases
3. The symbolisation text for test case 33 is the text for Area objects "AP(FSHFAC04)" - the correct text is "SY(FSHFAC04)" as the object in the test case is a Point object.
4. The symbolisation text for test cases 36, 37 and 38 is incorrect. The correct text is "AP(MARCUL02)" instead of "AP(MARCUL04)"
5. The symbolisation text for test case 32 should also account for when symbolised boundaries have been selected for display. There is an additional symbol and expanded symbols noted.

If any more issues with the reference spreadsheet are noted please notify UKHO using the contact details in the original test dataset.
