

Ana Navarro is an Assistant Professor at the Department of Geographical Engineering, Geophysics and Energy of the Faculty of Science of the University of Lisbon. She holds a diploma in Geographical Engineering from the University of Lisbon, a MSc degree in Geographical Information Systems from the Technical University of Lisbon and a PhD in Geographical Engineering and Geoinformatics. Her main areas of interest are the estimation of crustal deformation from GPS observations, the establishment of relationships between volcanic structures and active tectonics from remote sensing data, land use/cover classification from remote sensing data and seabottom characterization from backscatter data.

Aldino Campos is the Geomatics Adviser for the Portuguese Task Group for the Extension of the Continental Shelf. He graduated in Naval Sciences (Naval Academy) and holds a MEng degree in Geodesy and Geomatics Engineering (University of New Brunswick) and a PhD in Territory Engineering (Technical University of Lisbon). He is also and a Hydrographic Engineering (Hydrographic Office, Portugal). His main interests are spatial data management, data integration and marine spatial planning

Filipe Brandão is a Spatial Data Analyst and Spatial Database Administrator at the Portuguese Task Group for the Extension of the Continental Shelf. He holds a diploma in Biophysics Engineering (University of Évora) and a Master of Science degree in Geographic Information Systems (Technical University of Lisbon). His main interests are spatial data management, spatial analysis and GIS Web mapping.

Adolfo Lobo is hydrographer (IHO - Cat.A) at the Portuguese Task Group for the Extension of the Continental Shelf. He holds a diploma in Naval Technologies of the Superior School of Naval Technologies. Presently is enrolled in a Master of Science program at the University of Lisbon, in Geographic Information Systems, Technology and Applications. His main interests are Multibeam data processing/management and seabottom characterization based on backscatter data.

Manuel Pinto de Abreu is the head of the Portuguese Task Group for the Extension of the Continental Shelf. He is also the responsible for the Mission for the Maritime Affairs. He holds a diploma in Naval Sciences (Naval Academy), a degree in MSc and a PhD in Physical Oceanography (Naval Postgraduate School, Monterey, USA). He is also and a Hydrographic Engineering (Hydrographic Office, Portugal). His main interest is the management of the maritime space from the coastal areas to the deep sea.
