

**WORLD-WIDE NAVIGATIONAL WARNING  
SERVICE SUB-COMMITTEE 9<sup>th</sup> Meeting  
(WWNWS 9)**

**28 August - 1 September 2017**

**Cape Town, South Africa**

**IMSO Liaison Report**

**Moin Ahmed  
Director General  
International Mobile Satellite Organization**

## About IMSO

- 103 Member States
  - *HONDURAS is the latest addition to Organization*
- Assembly of Parties
  - *Meets once in every two years*
- Advisory Committee
  - Meets twice in a year
- Headquarters
  - *99 City Road, London (UK)*

## IMSO – Main responsibilities

- **Article 3 of the IMSO Convention**

Ensuring the provision, by each Provider (so far Inmarsat), of maritime mobile satellite communications services for the GMDSS according to the legal framework set up by IMO (IMO Res.A.1001(25))

- **Article 4 of the IMSO Convention**

Performing the functions and/or duties of LRIT Coordinator as per Resolution MSC.275(85)

- Participating in the work of IMO and other international bodies/fora on all GMDSS and LRIT-related matters

## IMSO relationships with other organizations

- **United Nations and Specialized Agencies**
  - *IMO, WMO, ITU, ICAO and UNOOSA*
- **Intergovernmental Organizations**
  - *IHO, COSPAS SARSAT, Intersputnik, ITSO, EC and EUTELSAT IGO*
- **Non-Governmental Organizations**
  - *ISO, CTO, CIRM, ICS and IALA*
- **MoUs signed with:**
  - *IALA, ICS, CIRM, ISO, WMO and Intersputnik*

# GMDSS

# Mobile satellite communication systems

- So far, Inmarsat is the only recognized mobile satellite communication service provider in the GMDSS
- Ships equipped with Inmarsat terminals rely on Inmarsat to send/receive safety communications
- Inmarsat is a provider of public safety services - therefore oversight is inevitable

# GMDSS oversight - legal instruments

- IMSO Convention
- IMO Assembly Resolution 1001(25)  
Criteria for the provision of mobile satellite communication systems in the global maritime distress and safety system (GMDSS)
- Public Services Agreement  
Between IMSO and GMDSS service provider

## Requirements for a GMDSS provider

- Support distress and general communications in the ship-to-shore and shore-to-ship direction
- Support broadcast of MSI
- Coverage
- Continuous availability – 99.9%
- Spare satellite capacity
- Capability to restore services within 60 min

# GMDSS oversight activities

- Public Services Committee meetings
- Satellite contingency exercises
- Regular biweekly meetings
- Request regular reports on availability statistics
- Request report on any satellite outage
- Establish a link between States and Inmarsat
- Report to IMO on an annual basis
- Issues International SafetyNET certificates

# Updates on existing services:

- Closure of Inmarsat B service
  - decommissioned on 11<sup>th</sup> of January 2017.
- Notification for closure of Fleet-77 service
  - December 2020
- SafetyNet II
  - has been continuously tested by a number of MSIPs
  - feedbacks received and are currently being reflected to the next release which is expected to be in production later this year.

# Evaluation of new GMDSS applicant – Iridium application for recognition

## GMDSS – Iridium application process

- June 2013 – US notified MSC 92 of its intention to sponsor Iridium’s bid to become the next GMDSS provider
- July 2014 – US submitted Formal application to NCSR 1
- Nov. 2014 – MSC 94 requested IMSO to undertake the technical and operational assessment of Iridium.  
Scope of the assessment: IMO Resolution A.1001(25) and MSC.1/Circ.1414

## GMDSS – Evaluation of Iridium capabilities

- Progress on the assessment of the Iridium application
  - Dec 2014 – IMSO-Iridium Agreement signed
  - Mar 2015 – IMSO Experts started the assessment work
  - Apr 2015 – First visit of experts to Iridium facilities in the US
  - Jun 2015 – IMSO review on first visit and future plan
  - Sep 2015 – Second visit to Iridium facilities in the US
  - Nov 2015 – Finalization/submission of assessment report
  - Mar 2016 – NCSR 3 considered the report & identified outstanding items before Iridium could be recognized
  - Jun 2016 – Consideration of NCSR recommendation by MSC 96

## GMDSS – Iridium assessment timelines

- Jun 2017 – MSC 98 approved Performance Standard for SES terminals for Iridium to comply with
- Sept 2017 - The assessment of outstanding items continues
- Oct 2017 - IMSO completes assessment of Iridium items
- Nov. 2017 – IMSO submits assessment report to NCSR 5.
- Mar 2018 – NCSR 5 considers IMSO assessment report & submits report to MSC 99
- Jun 2018 – MSC 99 considers NCSR 5 report for recognition
-

- 
- 
- 
- 
- 
-

## GMDSS – multiple providers issues

- With the potential for recognition of Iridium as the new mobile-satellite communication service provider in the GMDSS, questions arise are:
  - how the two systems will operate for shipboard terminals
  - Broadcast of MSI (involves MSI provider)
  - Distress relay (involves SAR people)
  - how will IMSO undertake oversight?
- Iridium expressed intention to sign the Public Services Agreement (PSA) with IMSO to enable IMSO overseeing the performance of Iridium as a mobile satellite communication service provider in the GMDSS

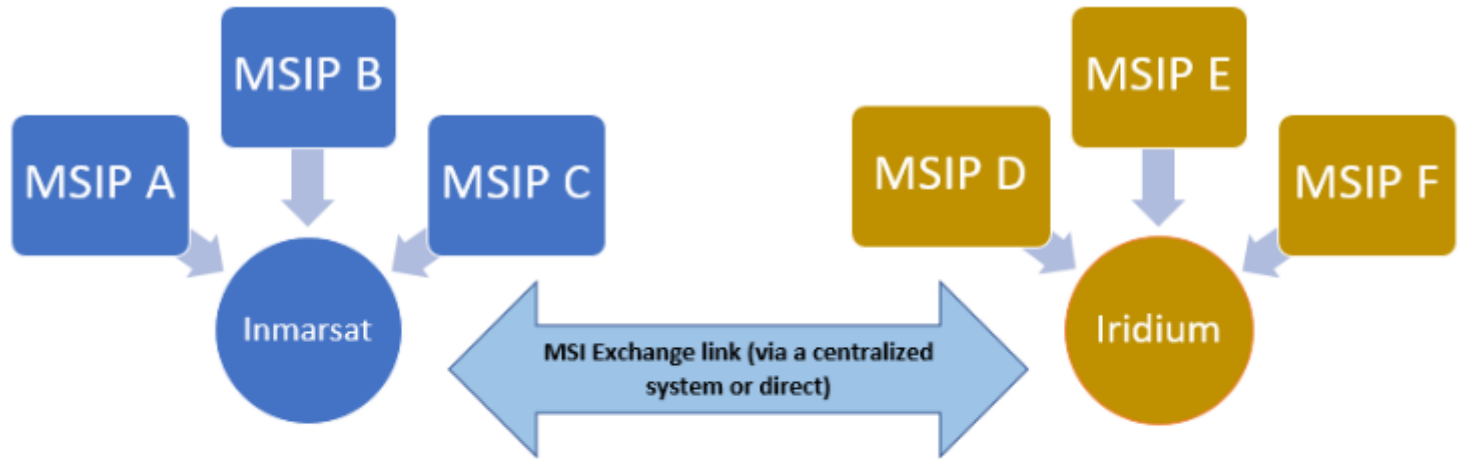

# Interoperability

**A potential solution that may work well for MSIPs (and RCCs)**

# Broadcast of MSI

Information Source	Service provider charging for MSI distribution	Service provider NOT charging for MSI distribution
MSIP A	Inmarsat	Iridium
MSIP B	Inmarsat	Iridium
MSIP C	Inmarsat	Iridium
MSIP D	Iridium	Inmarsat
MSIP E	Iridium	Inmarsat
MSIP F	Iridium	Inmarsat

## Evaluation of a new GMDSS system – Inmarsat FleetBroadband MSDS

- Nov 2016 - The United Kingdom applied MSC 97 to seek recognition of the Inmarsat FleetBroadband Maritime Safety Data Service for use in the GMDSS.
- MSC 97 - considered the application and forwarded it to the NCSR Sub-Committee for its consideration.

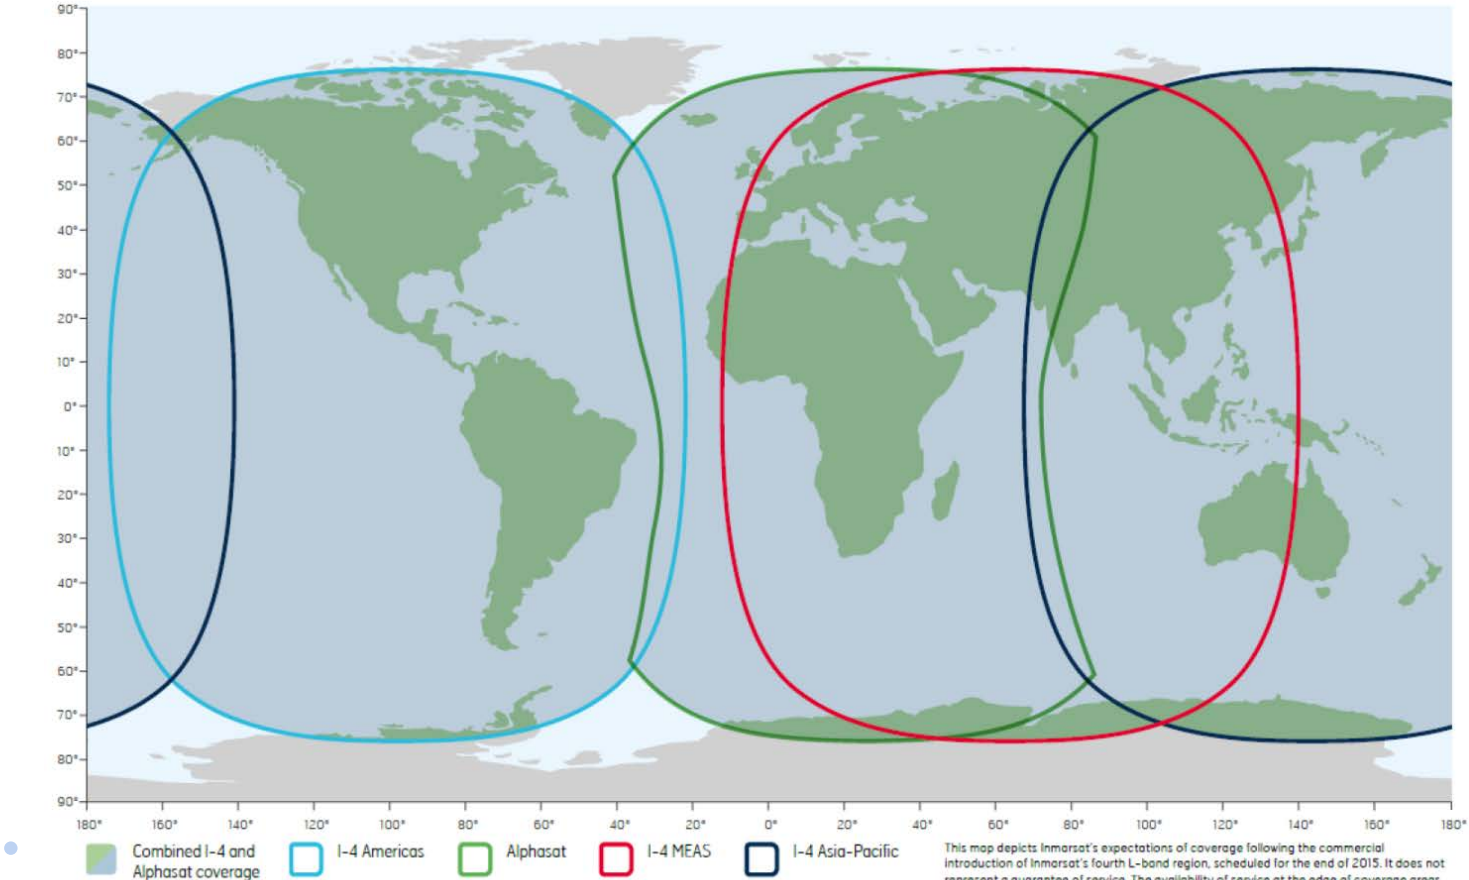

## Evaluation of a new GMDSS system – Inmarsat FleetBroadband MSDS

- NCSR 4 considered the application and
  - noted that recognition was sought initially for the coverage area under the **Inmarsat-4 Middle East and Asia (MEAS) region satellite that overlapped with other I-4 constellation satellites** but with the intention that recognition also included, subject to any necessary further assessment, additional coverage areas provided by future satellites.
  - agreed that **IMSO** should undertake the necessary technical and operational assessment and provide a report for consideration by the NCSR Sub-Committee.

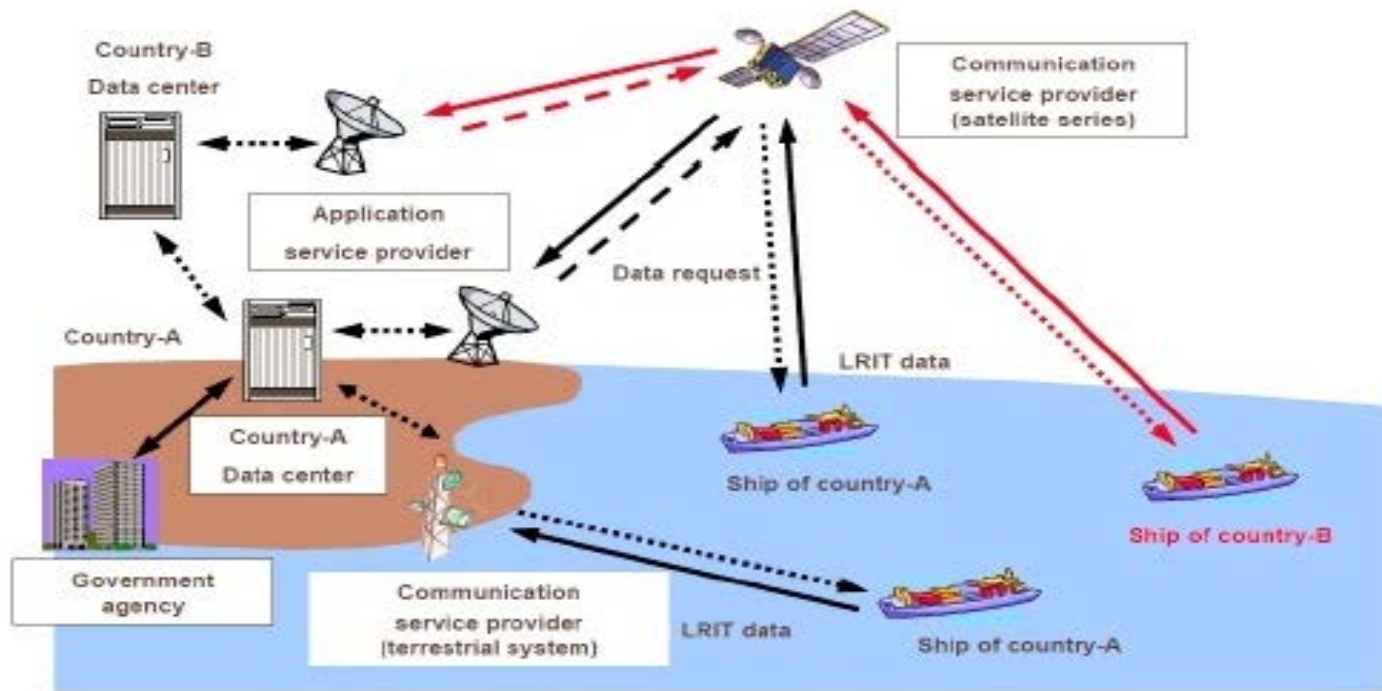

# GMDSS – Inmarsat FleetBroadband

## GMDSS – Inmarsat FleetBroadband

- March 2017 - IMSO selected experts to conduct the technical and operational assessment of Inmarsat FB.
- Aug 2017 - The assessment starts
- Oct 2017 - IMSO completes assessment of Inmarsat FB MSDS
- Nov. 2017 – IMSO submits assessment report to NCSR 5.
- March 2018 – NCSR 5 considers IMSO assessment report & submits report to MSC 99
- Jun 2018 – MSC 99 considers NCSR 5 report for recognition

# LRIT System

# LRIT System

## LRIT System Architecture

The standard for data format, set of possible commands, security and user interface may vary from place to place.

# LRIT

## LRIT

- Long-Range Identification and Tracking of Ships (LRIT) system was established by IMO and SOLAS Regulation V/19-1 entered into force on 1 Jan 2008
- LRIT's main purpose is to improve maritime security, safety and environment protection
- LRIT is based on collection of geographical location and identity information from ships and distribution of that information with entitled LRIT Data Users through a gateway
- IMSO has been appointed as the "LRIT Coordinator" to audit the performance of all components of the system and ensure the uniform implementation of the system worldwide (resolution MSC.275(85))

## LRIT

- IMSO has so far conducted more than 415 audits over the period since 2010
- The review and audit involves administrative, technical and operational functions. IMSO has developed a bespoke audit software to review the performance of LRIT components. The software was developed using the in-house resources.
- A total of 121 SOLAS Contracting Governments, Non metropolitan Territories and Special Administrative Regions are participating in the LRIT system through 55 LRIT Data Centres
- LRIT system's ground infrastructure stands out an excellent example of a globally available information exchange system.

# Website for the SafetyNET Panel

# Website for the SafetyNET Panel

- Skeleton of the website is ready
- IMSO is working with the chairman of the SafetyNET Coordinating Panel on the content of the website
- The URL for the website is [iscp.imso.org](http://iscp.imso.org)

# Capacity-Building

## Ongoing efforts

- Partnership arrangement
- Collaboration with other Organizations

**THANK YOU FOR YOUR ATTENTION**
