Revision of S-64 test data sets – explanatory note

Author: Mathias Jonas, BSH, Germany

The current version of S-64 test data set contains a number of inconsistencies with regard to incorrect coding which result in ambiguous presentation. Pol Le Bihan, Geomod, France submitted a solution to display the S-64 test data set by means of SVG-technology and added marks which explain the noted problems. An example is contained in CSMWG16-6.5B. The full set will be presented at the upcoming CSMWG16 meeting together with more comprehensive explanation.
