

Format for the Exchange of Harmonic Constants / Predictions submitted by UKHO

- 1.** No changes have been made to the existing arrangements / formats for the International Exchange of Predictions, which continues to operate successfully between MS, and the relevant TR's (specifically A6.1 and A6.2) continue to be important in this respect.
- 2.** Consideration in future may be given to updating the method of transfer between MS in a similar vein to that proposed by the UK for the exchange of harmonic constants (i.e. XML).
