# Paper for Consideration by NCWG

### Increasing the visual impact of wind turbines on paper charts

Submitted by:	UKHO
Executive Summary:	Request to improve / amend the depiction of wind turbines to
Related Documents: Related Projects:	draw more attention to the danger on paper charts NCWG4-06.8 Offshore Solar Parks For consideration among HOs considering wind turbines depiction

### Introduction / Background

Offshore energy facilities are increasing, UKHO has been advised by a Lighthouse Authority that the mariner would benefit by increasing the visual impact of the wind turbines symbol on paper charts.

### **Analysis / Discussion**

There are INT1 symbols for wind turbines:

The symbol is not universally adopted, variants include using position symbols and legends with or without limits.

WINDMOTOR O Windmotor

# **Considerations:**

- Why now wind turbines of different sizes are already a common coastal feature.
- The remedial impact on HOs to amend all charted symbols for wind turbines may be considerable.
- Will this improve the safety of navigation?
- There is already provision in S4 to draw additional attention to features for emphasis.

## Recommendations

- 1. HO's consider contacting local lighthouse authorities and other stakeholders for feedback regarding the symbol.
- 2. Consider the example provided, using symbol N1.1 or 1.2 draw additional attention to the danger. If use of a new symbol is approved, the amendment should only be made during the next new edition/revision of the chart.

#### **Justification and Impacts**

- S4 may be impacted (by including a reference specifically to the N1.1/N1.2 symbols for emphasis)
- INT 1 will not be impacted as there is already an appropriate symbol.
- There is no impact on ENCWG or other ENC depiction working groups as the symbol is sufficient on the digital products.
- Priority: low

# Action required of NCWG

The NCWG is invited to:

a. endorse

b. Agree that recommending use of N1.1/N1.2 will draw additional attention to wind turbine locations. HOs should consider use of N1.1/N1.2 during the next revision of the chart or where new wind turbines are charted.

c. note
