## Progress on the development of S-240 for DGNSS Station Information

### 1 SUMMARY

#### 1.1 Purpose of the document

Regarding the S-240 that is a XML format standard to maintain and provide DGNSS Station information, IALA and KRISO introduce the research progress and suggest to organise an expert group (task group or correspondence group) for DGNSS and S-100 experts to be involved.

#### 1.2 Related documents

- ENAV15-14.2.5 Statement of work for a Task Group on IALA DGNSS and eLoran databases
- ENAV15-14.2.6 Procedures for managing DGNSS Information

### 2 BACKGROUND

IALA as an international organization in charge of DGNSS relevant standards provide DGNSS station almanac on their website. Although IALA services DGNSS station almanac as a document, the distribution method can be inefficient and cause human errors. The improvement of maintenance and service method was raised by IALA members.

<sup>1</sup> Input document number, to be assigned by the Committee Secretary

<sup>2</sup> Leave open if uncertain

Regarding the issue of DGNSS station, an agenda named as “Procedures for managing DGNSS information” was discussed in the 15<sup>th</sup> e-Nav meeting and two alternative approaches were suggested

- Store and manipulate the information as a spreadsheet – this would make it easier to search and check for conflicts in frequencies and ID numbers.
- Encode the information as XML files, so that it can be updated online. An extension to this approach would be to provide an IALA S-100 Product Specification for DGNSS information. This would be very similar to the AtoN Information Product Specification currently being finalised.

Regarding the S-240 that is a XML format standard to maintain and provide DGNSS Station information, it's introduced the research progress by IALA and KRISO and suggested to organise an expert group for DGNSS and S-100 experts to be involved.

## **3 DISCUSSION**

### **3.1 2014 IALA DGNSS DB UPDATE**

IALA DGNSS DB before 2014 update had gaps between it and the then operating status worldwide, where no information had been provided, while some of the existing information was outdated. IALA carried out a complete enumeration research of all national members as well as non-member countries. IALA DGNSS update proceeded over the 3 months from September to November 2014. The update was focused on indeed which authorities managed and who were operating. A total of 406 DGNSS stations in 48 countries were shown in operation as of December 2014, according to the update result. A newly updated DGNSS DB is now published on the Radio Navigation Service section of the IALA website.

### **3.2 Identification of considerations for the development of S-240**

Although spreadsheet can be easy method for service of DGNSS station information, S-240 standard is more appropriate from a long-term perspectives to establish an international standard of DGNSS station and exchange information between relevant systems.

The agenda submitted in the 15<sup>th</sup> e-Nav meeting expressed concern for the XML format method based on S-100 to take long time to meet the purpose, but as the size and type of DGNSS station information is not huge, it's expected that the XML format for DGNSS station information can be developed in a short time.

Considerations for the development of S-240 DGNSS Station Almanac were identified to speed up the approaches and apply the standard to the DGNSS service work by IALA.

- Identification of work process for development and application of S-240
  - Development of a Draft of S-240 document and annex
  - Verification of S-240 using Test bed system
  - Establishment and review of S-240 XML (GML) DB
  - International standard activities by cooperation between IALA and IHO
  - Initiation of service on DGNSS station almanac using S-240 XML(GML) DB

- Quality control of DGNSS station almanac
  - Needs for verification of DGNSS station almanac
  - High precision of station position coordinates included in the DGNSS station almanac
- Experts group like task group or correspondence group,
  - Organizing experts group for DGNSS and S-100 experts to be involved
  - International standard activities by experts groups

### **3.3 Research results of S-240 Prototype**

KRISO has been involved in the development project of S-100/S-10X Test bed by IHO and has high interests in the S-2XX development of IALA. KRISO and IALA agreed with cooperation on S-240 development and have been making a progress on the development of S-240 Prototype.

KRISO and IALA identified requirements for IALA S-240 Product Specification to study S-240 Prototype

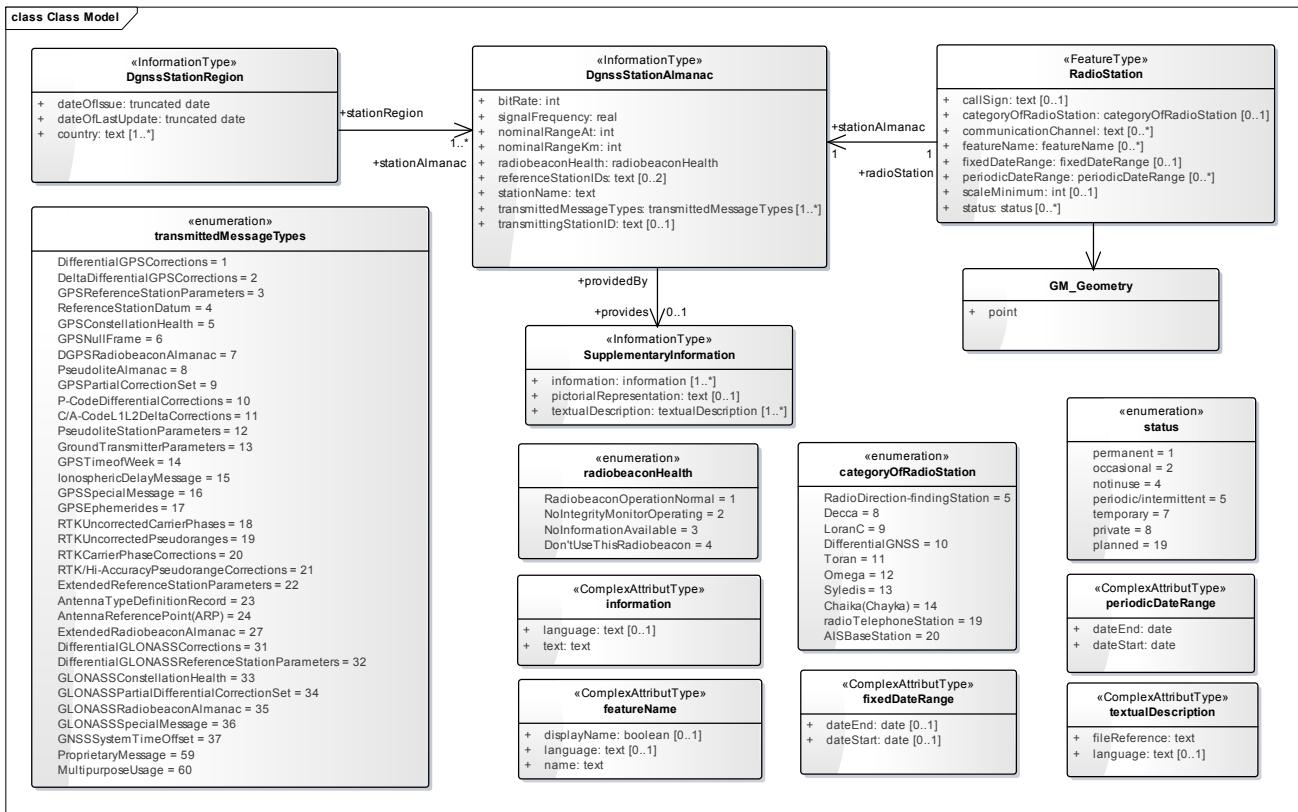

- DGNSS station almanac needs to be saved in XML format
- DGNSS station almanac can be serviced as a document form like current service method by IALA website.
- S-240 has to be developed according to the S-100 of IHO.
- S-240 information can be used with ENC(Electronic Navigational Chart)

According to the identified requirements on the S-240 product specification, the research scope of S-240 prototype include below topics.

- Draft document of S-240
- S-240 Feature / Portrayal Catalogue
- S-240 GML Schema
- S-240 GML Sample Datasets
- Style sheet to present S-240 GML Dataset to HTML format
- Demo S/W of S-240 sample dataset using ENC(Electronic Navigational Chart)

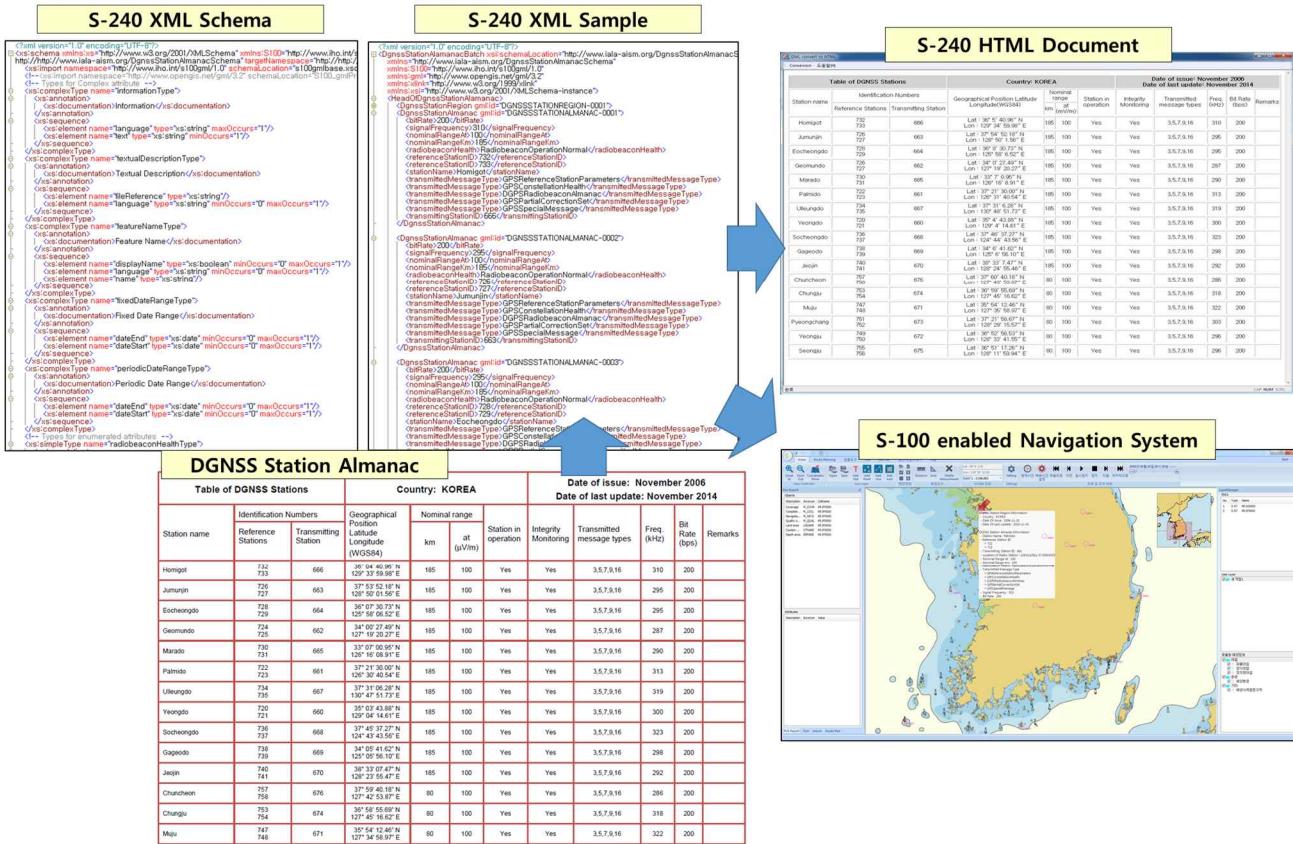

Design of UML data model is a starting point for the development of S-240 Product Specification based on the source data and user requirement for DGNSS station almanac. Two reference document were used to draft the S-240 UML data model, which is the DGNSS station almanac included in IALA website and RTCM Recommended Standards for Differential GNSS Service.

KRISO has cooperated with Jeppesen which is one of key actors in developing S-100 and S-101 of IHO. KRISO/Jeppesen data model for S-240 was drafted like Fig. 1

<Fig. 1> KRISO/Jeppeesen Data model for S-240

S-240 GML Schema, GML Sample dataset and HTML document were developed according the S-240 UML data model in this prototype study. Draft version of S-240 document was included as an annex of this document. S-240 GML sample dataset and application S/W will be demonstrated in the 16<sup>th</sup> e-Nav meeting.

<Fig. 2> Research results of S-240 Prototype

If S-240 as one of S-2XX specification products developed by IALA is fully developed, it's expected that maintenance and service method of DGNSS station information will be improved.

### **3.4 Future plan of S-240 development**

IALA and KRISO have been cooperating on the development of S-240. IALA updated source DB on the DGNSS station almanac and KRISO has been studied S-240 prototype with IALA jointly. It was planned for the future work.

- Organization of expert group on the development of S-240 Task group or correspondence group)
- Review of S-240 prototype by the organized expert group
- Report the progress of S-240 development to IALA(e-Nav.) and IHO(HSSC)
- Establishment of S-240 XML(GML) DB and Preparation for S-240 Service
- Approval of S-240 as an international standard and Kick off of S-240 Service by IALA

## **4 ACTION REQUESTED OF THE COMMITTEE**

The Committee is requested to:

- 1 review considerations for S-240 development raised in this document
- 2 provide recommendations on the S-240 prototype studied by IALA and KRISO jointly
- 3 suggest to organise expert group for DGNSS and S-100 experts to be involved and to participate by interested members of IALA

# DGNSS Station Almanac Product Specification

## Revision History

Version Number	Date	Author	Purpose

## **1. OVERVIEW**

### **1.1 Introduction**

The DGNSS Station Almanac is a document published and maintained by IALA, which contains information about the worldwide DGNSS stations. The DGNSS Station Almanac Product Specification provides a common structure for the exchange of information about DGNSS stations. The product contains the station name, identification numbers of reference stations and transmitting station, positions, nominal range, operation status, transmitted message types, frequency, bit rate, remarks related to a DGNSS station.

The Product Specification can be used to exchange DGNSS station information in a consistent form between IALA, Lighthouse Authorities, Hydrographic Offices and other organizations (*to include commercial and professional agencies*). This information can be also serviced as a document converted from the dataset

### **1.2 References**

#### **1.2.1 Normative references**

IHO S-100 IHO Universal Hydrographic Data Model, January 2010

#### **1.2.2 Informative references**

IALA 2014. DGNSS Station Almanac.

IALA 2001. RTCM Recommended Standards for Differential GNSS(Global Navigation Satellite Systems) Service version 2.3.

### **1.3 Terms, Definitions & Abbreviations**

#### **1.3.1 Abbreviations**

IALA-AISM International Association of Marine Aids to Navigation and Lighthouse Authorities

IHO International Hydrographic Organization

IMO International Maritime Organization

ISO International Organization for Standardization

### **1.4 IALA S-201 General Data Product Description**

**Title:** **DGNSS Station Almanac**

**Abstract:** Name, Identification numbers, positions, operation status of DGNSS stations. Additional general information can also be included.

**Content:** This Product Specification is a complete description of all the appropriate features, attributes and their relationships necessary to define a DGNSS station almanac. The detailed content is documented within the Feature Catalogue and the relationships defined in the Application Schema. Details of how these features should be symbolised are contained in the associated Portrayal Catalogue.

**Spatial Extent:**

**Description:** Global, marine, inland

**East Bounding Longitude:** 180

**West Bounding Longitude:** -180

**North Bounding Latitude:** 90

**South Bounding Latitude:** -90

**Temporal Extent:** Not Applicable

**Specific Purpose:** This product specification is intended to be used for encoding and exchanging information of DGNSS station almanac.

## 1.5 Data product specification metadata

**Title:** DGNSS Station Almanac Product Specification  
**S-100 Version:** 1.0.0  
**IALA S-240 Version:** 0.0.1  
**Date:** 1 April 2015  
**Language:** English  
**Classification:** Unclassified  
**Contact:** IALA ENAV Committee  
Producer  
IALA/AISM, 10 rue des Gaudines, St Germain en Laye, 78100, France  
Tel +33 1 345 17001  
Fax: +33 1 345 18205  
**URL:** <http://www.iala-aism.org/IALA-240>  
**Identifier:** IALA S-240  
**Maintenance:** This Product Specification is maintained by the Data Modelling WG of the IALA ENAV Committee on a 4 yearly cycle.

## **2. SPECIFICATION SCOPE**

**Level:** General Scope

### **3. DATA PRODUCT IDENTIFICATION**

A data set that conforms to this product specification will be identifiable by the discovery metadata that supports it.

<b>Title:</b>	DGNSS Station Almanac
<b>Alternate Title:</b>	IALA – DGNSS
<b>Abstract:</b>	Name, Identification numbers, positions, operation status of DGNSS stations. Additional general information can also be included.
<b>Geographic Description:</b>	Areas specific to marine and inland navigation.
<b>Spatial Resolution:</b>	DGNSS Station Almanac is scale independent
<b>Purpose:</b>	The purpose of a DGNSS Station Almanac dataset is to exchange name, identification numbers and operation status of DGNSS station. Additional general information can also be included.
<b>Language:</b>	English
<b>Classification:</b>	Unclassified
<b>Spatial Representation Type:</b>	Vector (Point)
<b>Point of Contact:</b>	Producer
<b>Use Limitation:</b>	None

## 4. DATA CONTENT AND STRUCTURE

A DGNSS Station Almanac dataset is a feature-based product. The following sub-sections contain the product application schema expressed in UML and an associated feature catalogue. The feature catalogue provides a full description of each feature type including its attributes and attribute values in the data product.

### 4.1 Application Schema

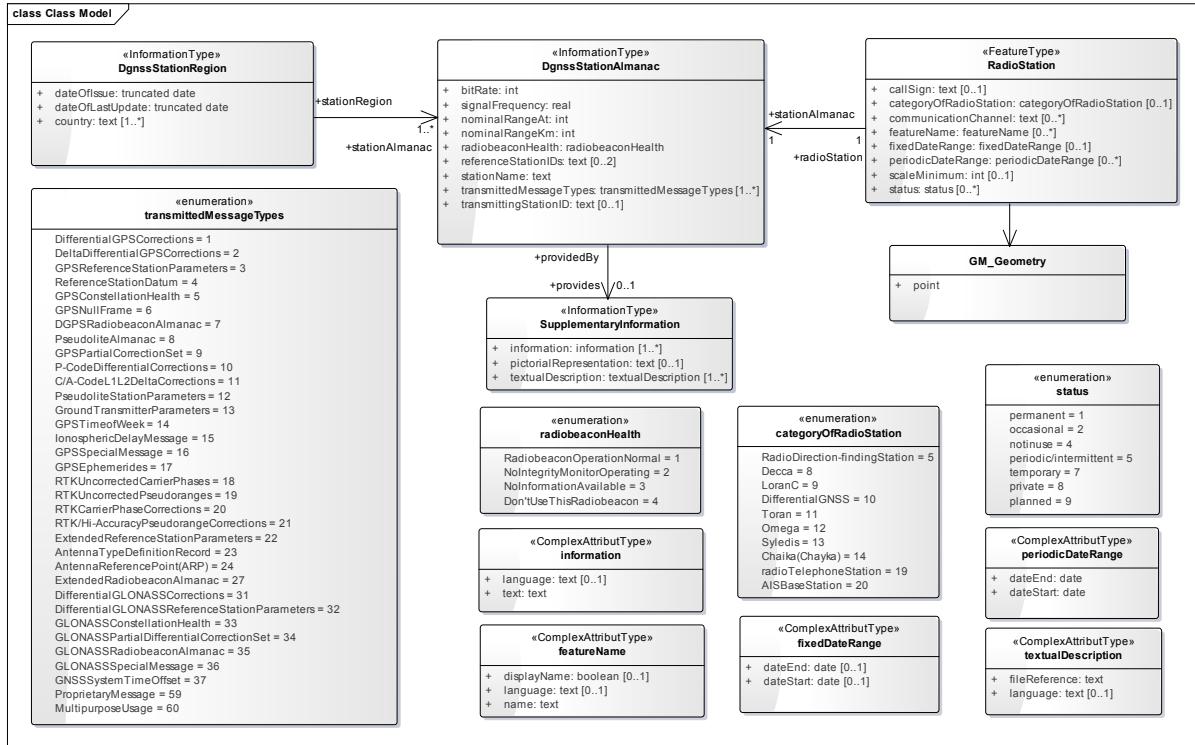

Figure 1. Application Schema of DGNSS Station Almanac

### 4.2 Feature Catalogue

A Feature Catalogue in XML format shall be available from IALA with an accompanying XSL Stylesheet.

**Name:** DGNSS Station Almanac Feature Catalogue

**Scope:**

**Field of application:**

**Version Number:** 0.1

**Version Date:**

**Producer:** IALA

**Functional Language:** English

### 4.3 Feature Types

#### 4.3.1 Meta Feature Types

No Meta Feature Types are included in this product.

#### 4.3.2 Geographic Feature Types

Geographic feature types form the principal content of the data product and are fully defined in the Feature Catalogue.

## **4.4 Attributes**

### **4.4.1 Numeric Attribute Values**

Floating point or integer attribute values must not be padded by non-significant zeroes.

### **4.4.2 Text Attribute Values**

Character strings must be encoded using the character set specified in Unicode Transformation Format-8 (UTF-8).

### **4.4.3 Mandatory Attribute Values**

Where attributes determine the display of a Feature, or essential to the overall feature type construction they may be mandatory. All mandatory attributes are identified in the feature catalogue.

## **5. COORDINATE REFERENCE SYSTEMS (CRS)**

### **5.1 Introduction**

The coordinate reference systems are separated into the horizontal and vertical components.

### **5.2 Horizontal Geodetic Datum**

WGS84 (World Geodetic System of 1984) shall be used for the horizontal reference system for spatial data (EPSG code 4326).

### **5.3 Vertical Datum**

A vertical datum attribute will be required on all relevant features and should be specified in the data set metadata.

## **6. DATA QUALITY**

### **6.1 Quality, Reliability and Accuracy of Data**

Attributes at the feature level indicate method of positioning and date of observation or confirmation of operation. These attributes are defined in the Feature Catalogue.

In dataset metadata the overall positional uncertainty and date to which the dataset has been validated must be provided.

## **7. DATA MAINTENANCE**

Datasets defined in this specification are maintained by the producer on an as required basis. Updating is done incrementally (change notes), including meta data.

## **8. PORTRAYAL**

A Portrayal Catalogue defines the display rules and symbology which apply to the Features defined in this specification.

## **9. DATA PRODUCT FORMAT (ENCODING)**

formatName	S-100 GML
version	1.0
characterSet	UTF-8
specification	S-100 GML Profile 1.0

**Table 9-1— Data product format**

The S-100 GML Profile 1.0 was included in the S-100 ver. 2.0. A GML application schema .XSD document is also provided to support data validation. An example of how this encoding could be implemented is shown in Annex A.

## 10. DATA PRODUCT DELIVERY

Item Name	Description
unitsOfDelivery	Datasets
transferSize	Undefined
mediumName	Undefined
otherDeliveryInformation	

**Table 10-1— Data product delivery**

### 10.1 Feature and Portrayal Catalogue Delivery

This specification include a Feature Catalogue and Portrayal Catalogue. The Feature and Portrayal Catalogues can be also provided on the IALA website and users informed by a change notice on that site when any changes occur.

## 11. METADATA

The data product specification metadata shall include the following items in Table 2 [extension to ISO 19131]:

Item Name	Description	Multiplicity	Type
title	Title of the data product specification	1	CharacterString
version	Version of the data product specification	1	CharacterString
date	Date the product specification was created / last updated	1	Date
language	Language(s) of the data product specification, e.g. translations	1..*	CharacterString
classification	Security classification code on the data product specification	0..1	MD_ClassificationCode (ISO 19115)
contact	Party responsible for the data product specification	1	CI_ResponsibleParty (ISO 19115)
URL	Online-address where the resource is downloadable	0..1	URL
identifier	Persistent unique identifier for a published version of the product specification1.	1	CharacterString
maintenance	Description of the maintenance regime for the product specification.	1	MD_MaintenanceInformation (ISO 19115)

Table 11-1— Data product specification metadata

## A-2. DGNSS Station Almanac – GML Sample Dataset

### A-2.1 Source data

Table of DGNSS Stations			Country: KOREA				Date of issue: November 2006 Date of last update: November 2014				
Station name	Identification Numbers		Geographical Position Latitude Longitude (WGS84)	Nominal range		Station in operation	Integrity Monitoring	Transmitted message types	Freq. (kHz)	Bit Rate (bps)	Remarks
	Reference Stations	Transmitting Station		km	at ( $\mu$ V/m)						
Homigot	732 733	666	36° 04' 40.96" N 129° 33' 59.98" E	185	100	Yes	Yes	3,5,7,9,16	310	200	
Jumunjin	726 727	663	37° 53' 52.18" N 128° 50' 01.56" E	185	100	Yes	Yes	3,5,7,9,16	295	200	
Eocheongdo	728 729	664	36° 07' 30.73" N 125° 58' 06.52" E	185	100	Yes	Yes	3,5,7,9,16	295	200	
Geomundo	724 725	662	34° 00' 27.49" N 127° 19' 20.27" E	185	100	Yes	Yes	3,5,7,9,16	287	200	
Marado	730 731	665	33° 07' 00.95" N 126° 16' 08.91" E	185	100	Yes	Yes	3,5,7,9,16	290	200	
Palmido	722 723	661	37° 21' 30.00" N 126° 30' 40.54" E	185	100	Yes	Yes	3,5,7,9,16	313	200	
Ulleungdo	734 735	667	37° 31' 06.28" N 130° 47' 51.73" E	185	100	Yes	Yes	3,5,7,9,16	319	200	
Yeongdo	720 721	660	35° 03' 43.88" N 129° 04' 14.61" E	185	100	Yes	Yes	3,5,7,9,16	300	200	
Socheongdo	736 737	668	37° 45' 37.27" N 124° 43' 43.56" E	185	100	Yes	Yes	3,5,7,9,16	323	200	
Gageodo	738 739	669	34° 05' 41.62" N 125° 05' 56.10" E	185	100	Yes	Yes	3,5,7,9,16	298	200	
Jeojin	740 741	670	38° 33' 07.47" N 128° 23' 55.47" E	185	100	Yes	Yes	3,5,7,9,16	292	200	
Chuncheon	757 758	678	37° 59' 40.18" N 127° 42' 53.87" E	80	100	Yes	Yes	3,5,7,9,16	286	200
