PROPOSED GEOMETRY CHANGES FOR REVIEW BY SCUFN

(J. Varner, U. of Colorado, L. Taylor, NGDC/IHO DCDB, M. Huet, IHB)

A set of 136 proposed undersea feature changes ready for approval and/or further discussion by the Sub-Committee has been included in a Google Docs spreadsheet called "Proposed Geometry Changes for Review by Sub-Committee".

In order to access that spreadsheet, SCUFN members are invited to proceed as follows:

1. Create a gmail account, i.e. a Google e-mail address with password, in case you don't have one already.
2. When this is done, send your Google e-mail address, e.g. micHEL.m.huet@gmail.com, to Jesse Varner (Jesse.Varner@noaa.gov).
3. In turn, you will receive an e-mail from Jesse Varner, giving you access to a [spreadsheet listing the concerned 136 names](#), with links which will allow you to view the existing and proposed geometries.
4. Examine each feature and indicate your approval or comments in the column with your name.

Spreadsheet characteristics:

- Each feature has a link to a map viewer that shows the proposed geometry in red and the existing geometry in green.
- Features in the Antarctic are shown in a polar stereographic map projection.
- Some of the features have additional screenshot images for further clarification.
- The spreadsheet has spaces for the Sub-committee members to enter their approval, or any comments they have.

It is planned to discuss the proposed changes that may be controversial at SCUFN25.
