Dear Sir/Madam,

The Ascension Island Government has a strong marine research program underway and one of our key research areas has been the three seamounts within our EEZ. Two of them are named however one feature is currently unnamed and we would like to submit the attached proposal to name this feature. We recently conducted a detailed study of this seamount (identifying it is much shallower than historically recorded) and will continue to conduct research around it over the next few years and as such having the feature named is much better to link our data results with.

Please let me know if you require any further information/data from us at this stage and also the timescale for a decision on our naming proposal.

Thanks for your help with this

Best regards

Dr Judith Brown
