His work varied from description of ammonite, especially discovery of an extraordinary ammonite, *Nipponites misrabilis* Yabe, geological study of Japanese archipelago, description of coral reefs, etc. In addition, he also published a significant paper on the geomorphology of the seafloor around the Japan with his student Dr. **Risaburo Tayama** (Yabe and Tayama, 1934), using the bathymetric charts issued by the Hydrographic Department of Japan. Note that the name of Dr. Risaburo Tayama was commemorated as Tayama Seamount.
