| *Related Projects:* | S-122 |

**Introduction / Background**

Some main components of the S-122 ProdSpec are under development, inter alia the Data Capture and Encoding Guide. Other components are awaiting the S-100 Edition 2.0.0 endorsement before the development can be resumed.

**Analysis/Discussion**

The current version of the S-122 DCEG is based on the S-101 (ENC) DCEG. The context features have been implemented.

Some parts need revision or group consideration. While waiting for the outcome of the harmonisation discussion between the various data models, the attributes are left intentionally out of the document. Only placeholders have been put in.

**Recommendations**

The SNPWG18 is invited to review the current version of the S-122 DCEG.

**Action required of SNPWG17**

The SNPWG17 is invited to:

     a.     note this paper and act as appropriate.
