

**#AIS on navigational marks.**

CSPCWG has developed new symbols to portray AIS on paper charts (INT1 S17.1 and 17.2). As ENC's are intended to be used in conjunction with ECDIS as part of a **integrated bridge system**, it is not necessary to encode AIS in an ENC.

**Encoders should note, therefore, that AIS information must not be included within an ENC.**

**Comment [c1]:** Is AIS currently handled on all SOLAS vessels in integrated bridge systems, or is this something for the future? If a buoy has an AIS fitted, it may be encoded in INFORM on the BUOY. We don't want to exclude this option as the ECDIS is an information system, so why the last paragraph. AU suggests this last para be deleted.

**Comment [jlp2]:** I propose that we discuss this at TSMAD 14, as this bulletin was written using the advice of the UKHO.
