

Proposal of Additional CATOBS value to the S-100 FCD

Register: **Hydro FDD**

Name: Category of Obstruction

Alphacode: CATOBS

CamelCase: CategoryOfObstruction

(For complex attributes include sub attributes here e.g.)

Sub attribute	Multiplicity		Infinity	Sequential
	Lower	Upper		

Definition:

Remarks:

Proposed Change:

Addition of Attribute value 'cleared production platform' as per INT1 section B-422.8 reference L22.

Justification:

Currently in order to code the 'site of a cleared production platform' one must code the areas as and obstruction area object with a category of obstruction of foul ground. The only method of encoding the description of that foul ground is by population of the Information field attribute.

It is recommended that "cleared production platform" specifically be captured as a valid value for the category of obstruction attribute.
