

S-64 Working Group 3 Agenda

V0.1 24/10/2013

The S-64 Working Group will meet alongside TSMAD 27 at the IHB in Monaco from the 2nd to 6th of December 2013.

The objective will be to progress the draft of S-64 3.0.0 to completion and to a stage where test datasets can then be created.

This will enable a complete final draft with test datasets to be available for review during early 2014.

HSSC will then approve via circular letter during mid 2014 and the version will be available for familiarisation and use by ECDIS manufacturers. Final publication will be coincident with the publication of IEC 61174 Edtn 3 during 2015 at which point S-64 will become 'active' and part of the type approval process.

Agenda

1. Review Document

Working through the input draft in order this activity will form the bulk of the working groups task.

Input from extant actions will be incorporated into a current input draft prior to the meeting by the UK.

2. Assign Actions

Tasks identified during the document review will be documented and assigned.

3. Develop and agree completion plan with timeframes

This will reflect the tasks assigned and will enable the group to report back to TSMAD and ensure coordination of the completion of this work to meet the desired timeframes.
