

## **Workshop on S44**

Action 4 of the 13<sup>th</sup> BSHC Conference tasked Germany, Latvia and Finland to investigate, whether a workshop on the new edition of S44 could be beneficiary for BSHC Members.

Generally, a workshop on S44 would be a very good opportunity to improve the skills of surveyors and to exchange knowledge and views about the current hydrographic surveying standards, but at the time there is no volunteering host and there are no nominations of trainees or lecturers.

A course could be carried out, if the following requirements were fulfilled:

- a MS volunteers to hold the workshop
- other Member State are contributing actively (i.e. lecturers);
- a sufficient number of attendees are being nominated by Member States.

Thus, the Conference is invited to ask MS

- whether there are potential trainees to be nominated;
- to volunteer for holding such a workshop
- to provide assistance with lecturers or other resources

If the resources could not be allocated, the Conference is invited to postpone a course or workshop on the Special Publication S44, until the need is being raised again.
