### The Baltic Sea Hydrographic Commission,

which is an integral part of the International Hydrographic Organisation (IHO), promotes the technical co-operation in the domain of hydrographic surveying, marine cartography and nautical information among the neighboring countries of the Baltic Sea region.

The main objectives of the Commission are the coordination of the production of the Baltic Sea INT Charts, the coordination of hydrographic re-surveys, harmonization of chart datums, harmonization of Baltic Sea ENCs, and the exchange of information and the harmonization of practices with regard to various issues related to hydrography.

The most recent development is the [Baltic Sea Bathymetric Database](#) – accessible via this portal.

The BSHC website is today working as an useful tool for communication of BSHC issues. It is also a document holder for the working groups of the RHC. SMA is coordinating the site and will continue to publish information that is sent to [sma@sjofartsverket.se](mailto:sma@sjofartsverket.se). For the best result, please be clear when sending documents on where and how they should be published and also make sure all information is updated and relevant.

All BSHC working groups publish agenda and minutes from the respective working group meetings. Some are missing, but most working groups have published updated material.

Actions for the BSHC 22<sup>nd</sup> Conference:

- note the paper
- discuss principles for future reporting regarding BSHC web page.
