

# Implementing Marine SDI Through Capacity Building

## A TopoBathy Database for Mozambique

NIOHC – Colombo, 20<sup>th</sup> – 23<sup>rd</sup> March 2012

# Introduction

- The term Spatial Data Infrastructure (SDI) is used to describe the base technologies, policies and institutional arrangements that facilitate the availability and access to spatial data
- A Marine SDI encompasses marine geographic components and related business information
- Bringing Land and Sea data together is a key aspect of Marine SDI and is the focus of this presentation

# Foundation for the Mozambique project

- **Coast-Map-IO** project: *'To increase the capacity of countries to collect and use bathymetric and topographical data to support management of tsunami risk in coastal areas'*
- Participating Countries : Tanzania, Kenya, Madagascar, Mauritius, Mozambique, Seychelles, Comoros, Maldives, Bangladesh, Myanmar, Sri Lanka, Thailand
- CARIS was involved in delivering training
- The IHO/IOC made a technical visit to Mozambique and identified the need for integrated bathymetric and topographic data

## The Next Step: Partners for Water

- Dutch organization supported by the government with a 5 year focus to water related projects in Mozambique, Bangladesh, Egypt, Indonesia and Vietnam
- Partners for Water program supplied a grant to CARIS
- To implement a TopoBathy Database at INAHINA for the pilot areas of Beira & Quelimane in Mozambique

# Participants in the TopoBathy Database Pilot Project

<b>Mozambique Organisations</b>	
<b>INAHINA</b> Instituto Nacional de Hidrografia e Navegação	Bathymetric Data
<b>CENACARTA</b> Centro Nacional de Cartografia e Teledetecção	Topographic Data
<b>INAM</b> Instituto Nacional de Meteorologia	Tsunami Modeling
<b>Industry</b>	
<b>CARIS</b>	Software & Expertise
<b>BMT-ARGOSS</b>	Satellite Bathymetry

# Project: Software, Data, Training and Support

## INAHINA

3 weeks CARIS Bathy Database Training & Consultancy

2 x CARIS BASE Manager & Bathy DataBASE Server Licence

1 Year of Updates & Technical support

**BMT ARGOSS:** Bathymetric Datasets for pilot areas Beira & Quelimane

## CENACARTA & INAM

1 week CARIS BASE Editor Training

1 x CARIS BASE Editor Evaluation licence for 6 months (from February 2012)

# What is a TopoBathy Database

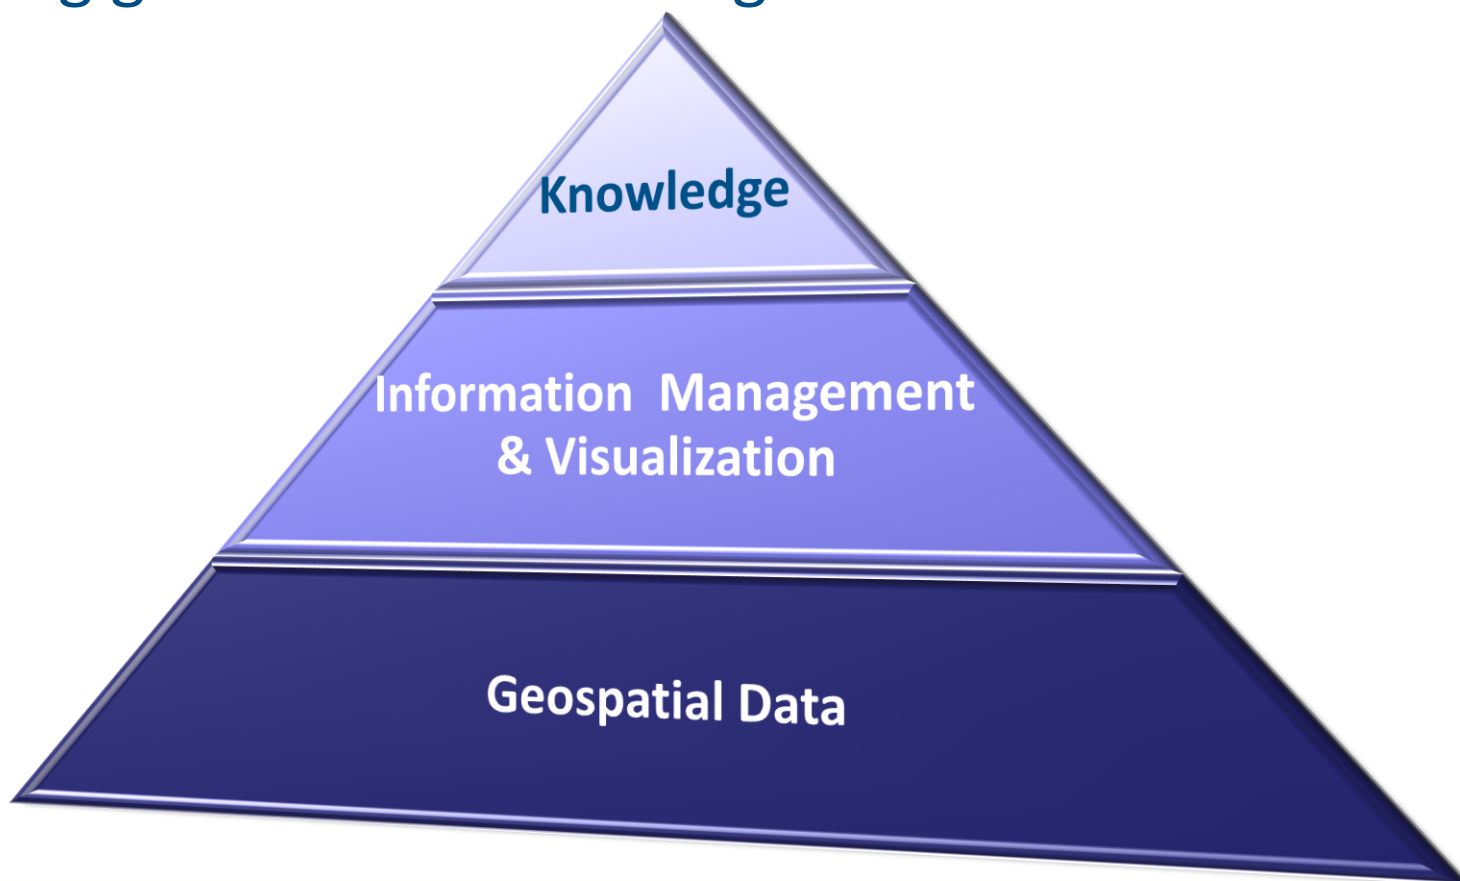

A geospatial database that contains topographic elevations as well as bathymetric depths

CARIS Bathy DataBASE is used to import, manage, visualize and analyze elevation data.

# Pyramid of Knowledge

Managing & visualizing geospatial data in a database, leads to information, which creates knowledge, thus enabling good decision making.

# Knowledge to make Decisions

- The TopoBathy database should provide a single centrally accessible location for elevation data
- The database could provide a basis for paper, electronic chart and map production
- Tool for Coastal Zone Management
- Input model for Disaster Protection (tsunami/cyclones, flood modelling)

## Knowledge to Protect

Access to geospatial information helps to protect against natural disasters:

*‘Given its geographic location, Mozambique is highly vulnerable to natural disasters, in particular those of a hydro-meteorological nature (such as floods, drought and cyclones). The terrain of the country is mostly coastal lowland, with a vast network of rivers and tributaries emptying into the Indian Ocean. The coastline is highly susceptible to cyclones and tropical storms.’*

Source: Climate Change Assessment for Mozambique - UN Habitat, 2009.

## Project Agenda

<b>Planning</b>	<b>Data</b>	<b>Deliverable(s)</b>
Assessment and conversion of available analogue and digital data. (INAHINA & CENACARTA)	10 Oct.-30 Dec. 2011	Digital datasets to be imported in BathyDB
Selection and processing of satellite images. (BMT ARGOSS)	10 Oct.-30 Dec. 2011	Digital datasets to be imported in BathyDB
Import digital datasets, convert to same reference system and combine as seamless elevation model in BathyDB. (CARIS)	2 Jan.- 3 Feb. 2012.	Seamless elevation model of first Pilot Area (Beira)
Create Training Manual for Beira Pilot Area	2 Jan.- 3 Feb. 2012.	Training Manual

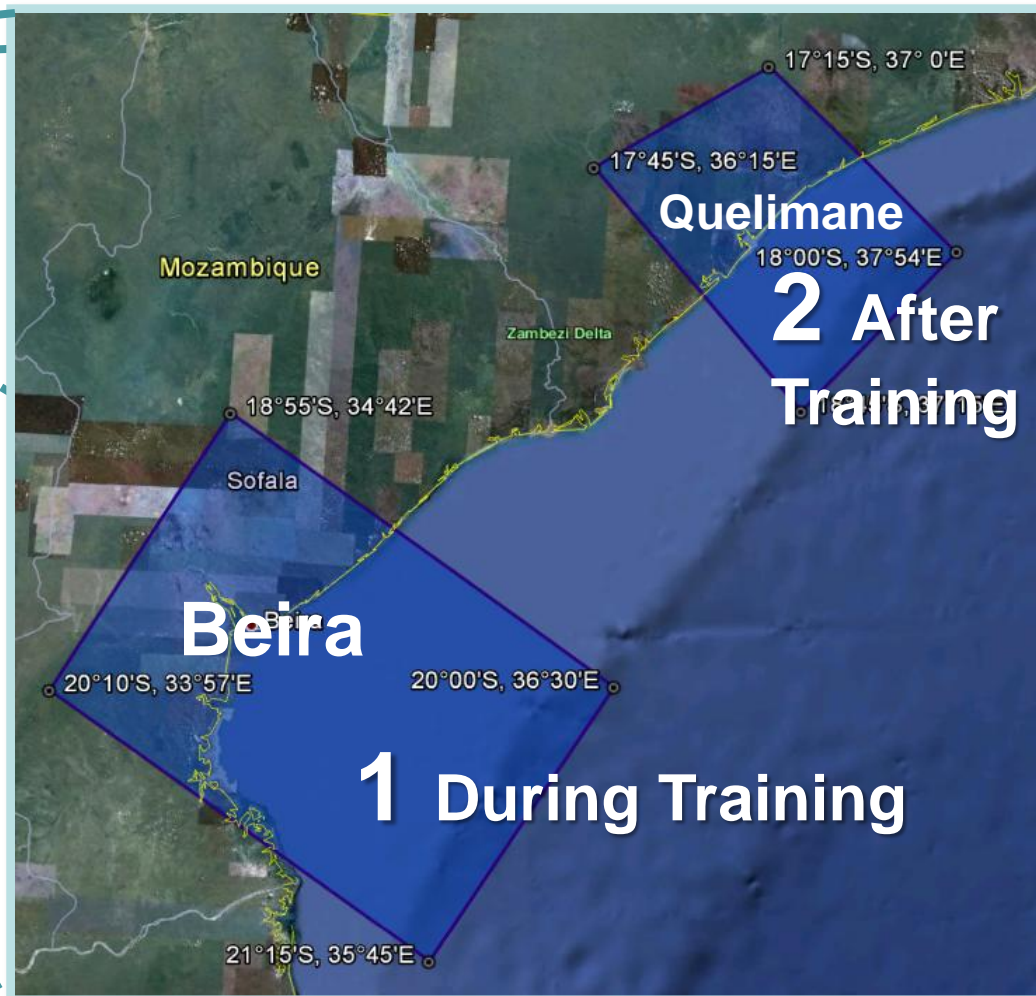

## Project Agenda

Planning	Data	Deliverable(s)
Maputo: Training Workshop Pilot for Area-1 : Beira ( <b>INAHINA, CENACARTA, INAM, CARIS</b> )	6 Feb.-17 Feb. 2012.	-Training manual -Combined Dataset Beira
Execution of Pilot for Area-2: Quelimane ( <b>INAHINA</b> ). CARIS HelpDesk Support	March – June 2012.	-Combined Dataset Quelimane
Documenting of the workflows, experiences and results. ( <b>INAHINA</b> )	March – June 2012	-INAHINA Report
Maputo: Consultancy & Presenting of the results. ( <b>INAHINA, CENACARTA, INAM, CARIS</b> )	1 week July/August 2012	-Final Datasets Beira & Quelimane -Final Report

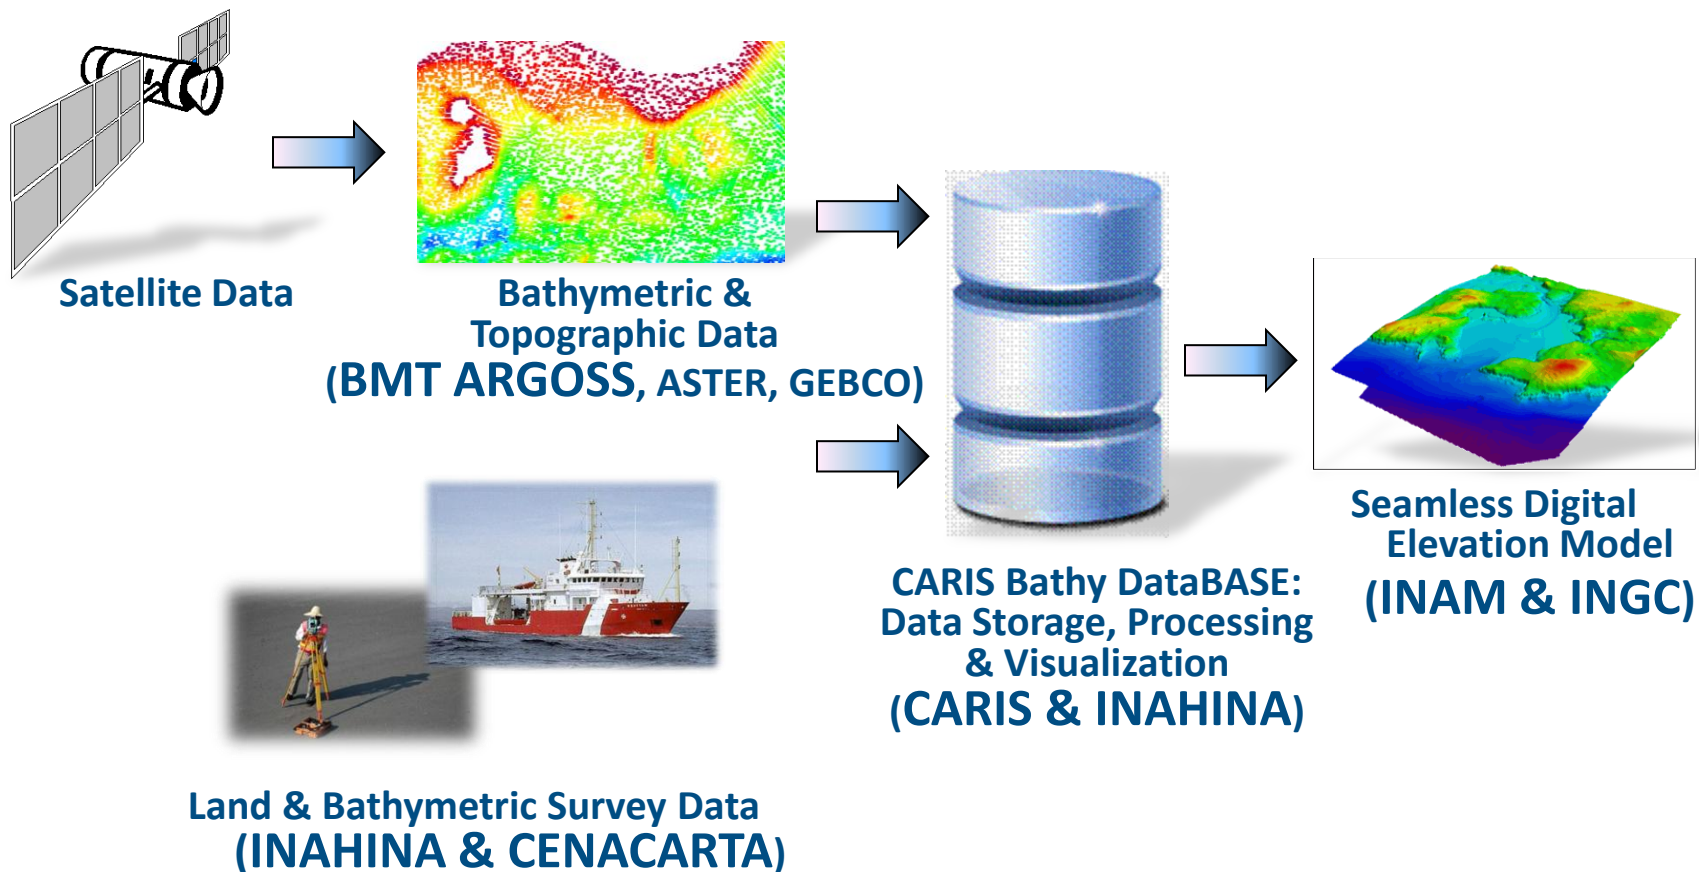

# Pilot Project Location

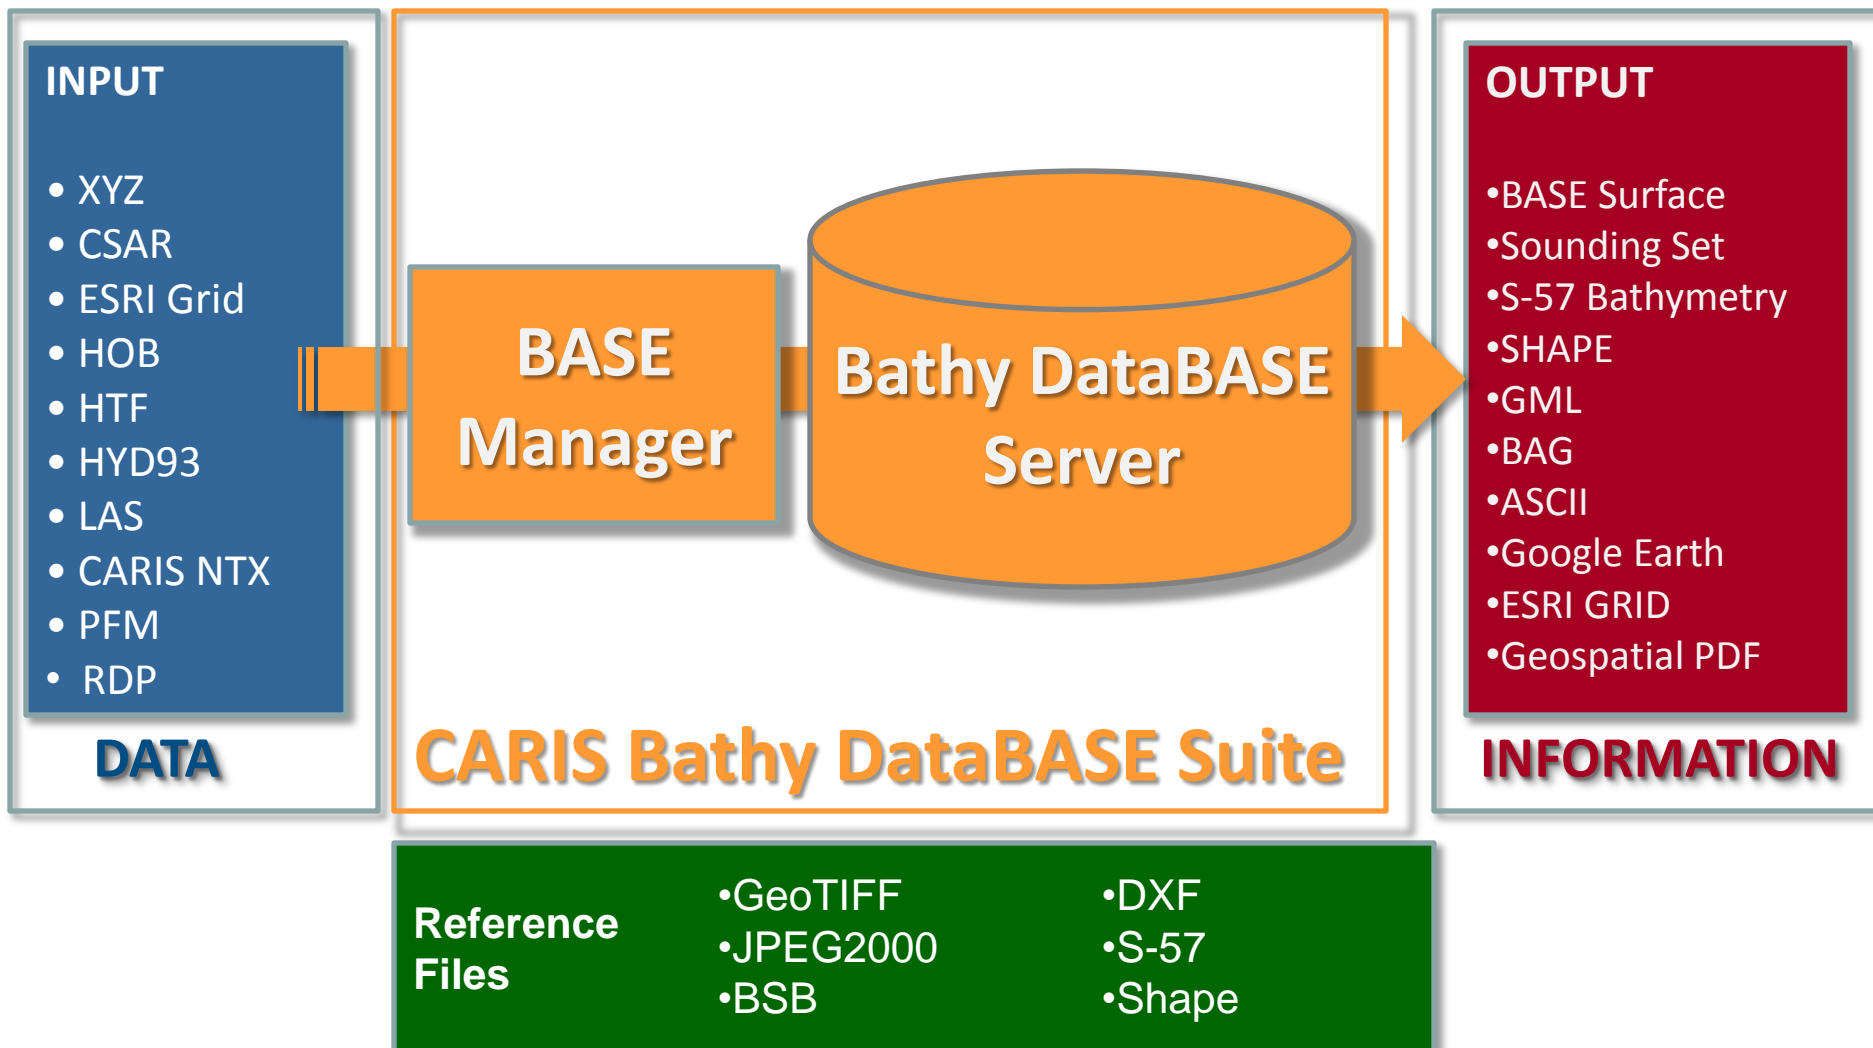

**Mozambique**

# Beira & Quelimane Pilot Project Workflow

# Bathy DataBASE Workflow

# Geospatial Source Datasets

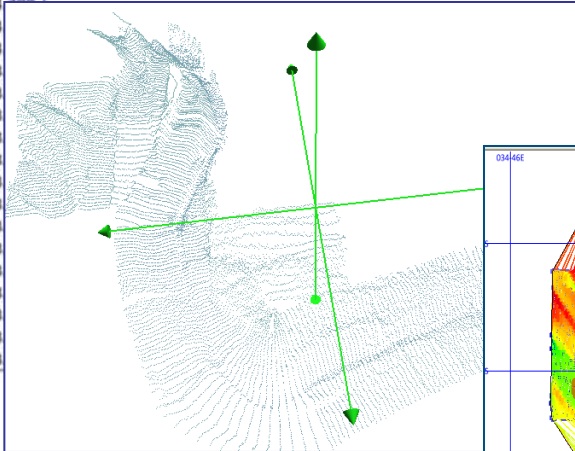

Organization	Type	Source	Vertical Datum	Resolution
<b>INAHINA</b>	Bathymetric	Survey	LAT	30
<b>BMTARGOSS</b>	Bathymetric	Satellite	LAT	50
<b>GEBCO</b>	Bathymetric	Survey/ Satellite	MSL	100
<b>CENACARTA</b>	Topographic	Survey	MSL	50
<b>ASTER</b>	Topographic	Satellite	MSL	100

# Importing data into the Bathy DataBASE

```

## After the Pilot Project

- Expand the Mozambique TopoBathy Database in **Time** and **Space**
  - Continuously improve the model by adding new bathymetric and topographic datasets into the model
  - Expand database coverage to other parts of Mozambique
- Optimize the data for production of Nautical Charts and for use as a basis for other scientific analysis
- Use the TopoBathy Database for Coastal & Disaster Management
